

Build a Network – Cisco Packet Tracer Project

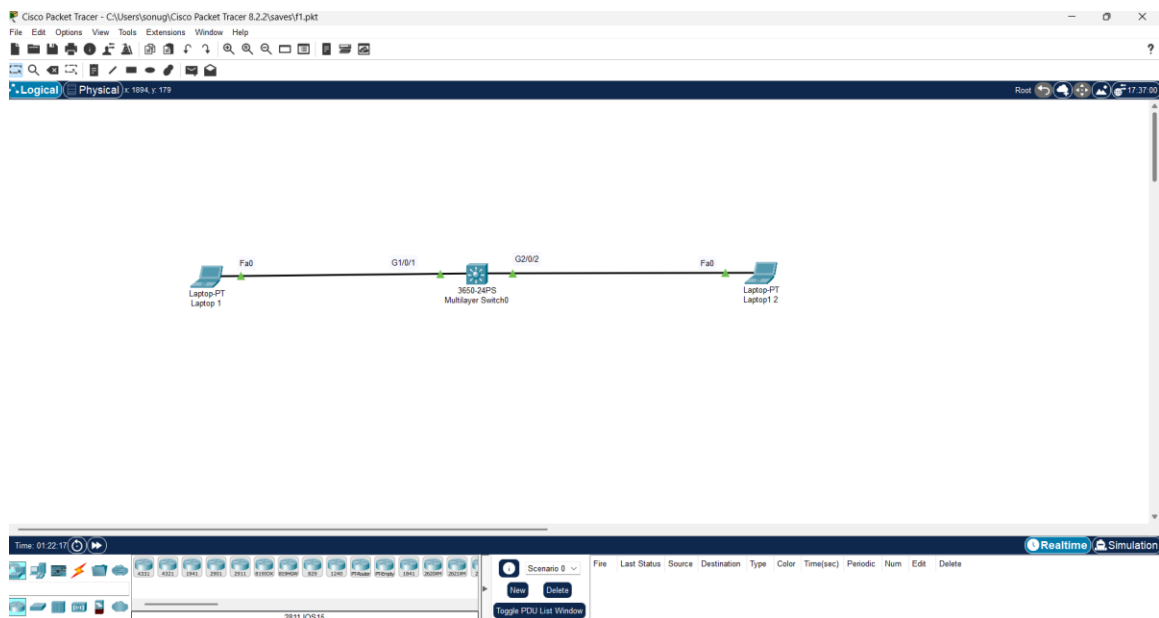

Overview

This project demonstrates how to build a simple Local Area Network (LAN) using Cisco Packet Tracer. Two laptops are connected through a Cisco 3650-24PS switch, and basic IP configurations are applied to verify network connectivity using the ping command.

Network Setup

Devices Used:

- Laptop 1
- Laptop 2
- Cisco 3650-24PS Switch

Connections:

- Laptop 1 → Switch (Fa0 → Gi1/0/1)
- Laptop 2 → Switch (Fa0 → Gi1/0/2)

IP Configuration

Device	IP Address	Subnet Mask	Gateway	DNS
Laptop 1	192.168.1.1	255.255.255.0	192.168.1.254	8.8.8.8
Laptop 2	192.168.1.2	255.255.255.0	192.168.1.254	8.8.8.8

Steps

- Add devices to the workspace.
- Power on the switch.
- Connect cables using Copper Straight-Through.
- Configure IP, gateway, and DNS on both laptops.
- Test connectivity using: ping 192.168.1.2

Result

Successful ping replies confirm that both laptops are connected and communicating over the network.
